INTERPRETIVE COMMENT

Ferritin (18 ng/mL) is at the low end of range and has declined on serial testing on file: 52 (03/2025) -> 41 (08/2025) -> 34 (01/2026) -> 18 (05/2026). Low iron saturation (11%) with elevated UIBC is consistent with depleting iron stores; correlate clinically (menstrual losses, intake, absorption). 25-OH Vitamin D insufficient. hs-CRP mildly elevated. TSH high-normal. Calculated LDL-C mildly elevated. Remaining analytes within reference limits.

Flags: H = above reference range, L = below reference range. Calculated (calc) values per standard formulae. SYNTHETIC DOCUMENT - generated for software demonstration only. Not for clinical use.
